Custom design In industrial parts

We are a manufacturing company of tools, injection molds and automation systems for the industrial sector.

Die-cut	Electrodes	Anvils	Gages (high pressure)	Various machining	Injection molds
Terminal applicators	Drivers	Automation	Industrial fixtures	Aluminum tables	Connectors
Tungsten					Request your Tungsten quote <small>100% purity guaranteed!</small>

Software development

Custom business software, with innovative solutions, a modern design and the best usability analysis.

Create business **software** solutions.

We create custom business software development solutions, with innovative solutions, a modern design and the best usability analysis, satisfying the needs and requirements of the client.

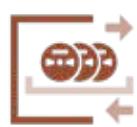

Traceability systems	Process automation	Communication Modbus
SCADA Systems	Software Consulting	Software Modernization
Reports and Statistics	Inventory control

Synergie[®]

This Technology of Synergie Machine models 207NCM, 208NIM, 209NCM & 211NCM is mainly aimed at the suction nozzle of the mainstream SMT industry, which can clean, detect and trace the suction nozzle. The equipment adopts advanced optical detection technology and intelligent control software, which can detect the surface, inner hole and vacuum degree of different types of suction nozzles, and can read the two-dimensional code and connect with MES system to realize the whole process control of the nozzle in the circuit board mounting process.

Applicable models: Fuji NXT series, Universal, Panasonic, Siemens and other mainstream models

Object nozzle: FUJI H24/V12/H24G standard nozzle

Siemens 933/913 and other standard suction nozzle

Global 3420/3430 and other standard suction nozzle

Panasonic 110s/115s and other standard suction nozzle

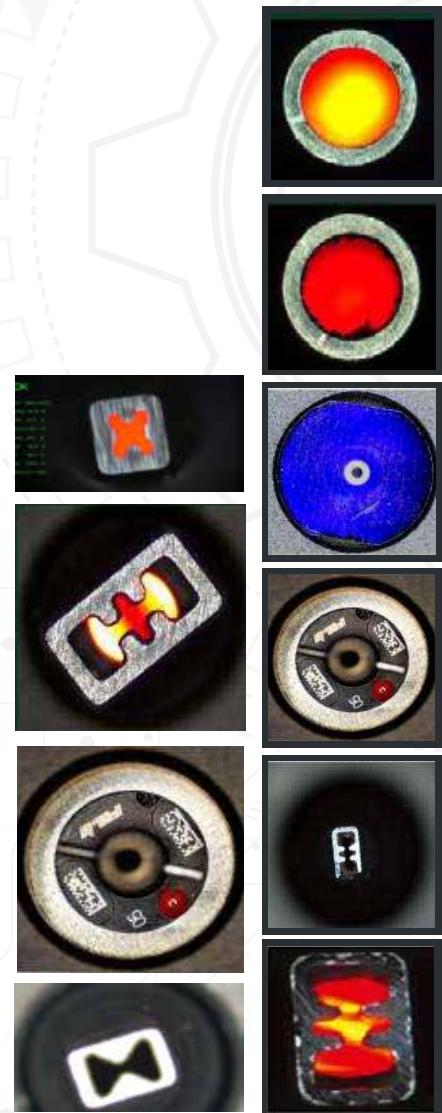

Dimensions: 600X500X700mm

Weight: 45kg

Nozzle plate installation number: 1

Single cycle: 24

Cleaning speed: programmable customization, the fastest 360 seconds/24

305SWM

The 305SWM intelligent steel mesh cleaning and inspection machine, is a single unit. It performs these functions optimally, maximizing efficiency without increasing the dimensions of the equipment, resulting in savings in both space and labor costs. This innovative stencil cleaning and inspection equipment directly addresses the current challenge in the industry by eliminating the need for manual reinspection after stencil cleaning. Thanks to a precise structural design, this machine intelligently integrates the functions of cleaning and stencil detection. A high-precision visual inspection camera scans and captures images on both the upper and lower surfaces of the steel mesh. Combined with intelligent software recognition technology, this innovative machine offers various applications such as rapid cleaning, efficient drying, intelligent identification, and MES record loading. It is anticipated to be a valuable addition to the SMT steel mesh cleaning industry, providing revolutionary applications.

Industrial CCD Camera: Option of 5 million/10 million pixels, industrial area scanning camera, CCD sensor.

Pixel Size: 16 um, optional 13 um.

Auto Focus: Adapts to different types of steel mesh and can adjust focus independently through software.

Water Tank Capacity: 60 L.

Steel Mesh Tension Detection: High-precision sensor automatically detects points for detection.

Measurement Accuracy: 2 N.

High-Pressure Cleaning Head: 2 pieces.

Cleaning Mode Selection: Cleaning, detection.

Cleaning Speed: Programmable.

Water and Oil Separator: Compressed air water and oil separator (recommended to replace once a year).

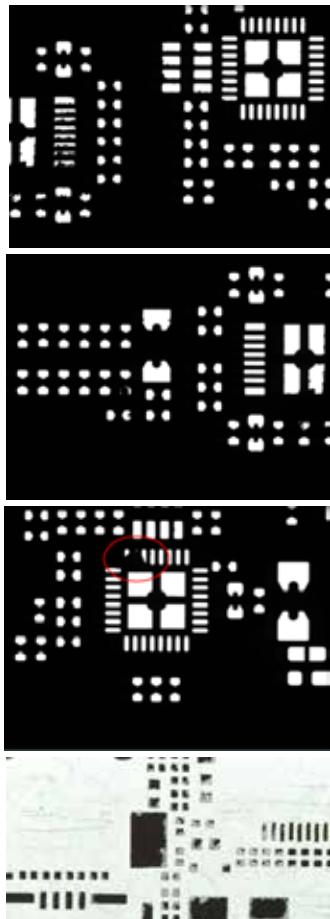

Filter Element: 0.005 mm food-grade PP cotton filter element (recommended to change once a week).

Air Supply: 0.6 Mpa.

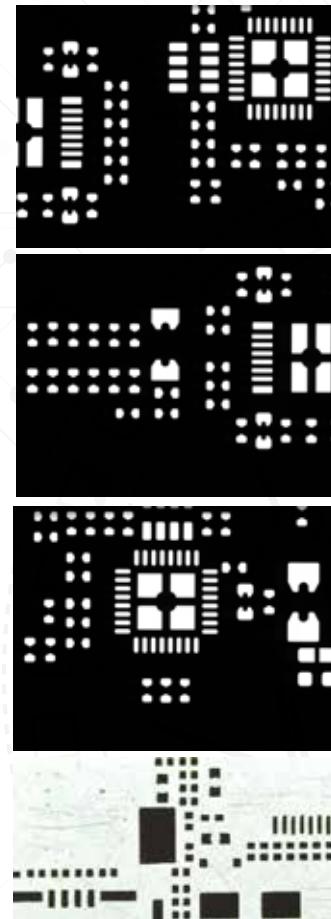

Voltage: AC220V.

CONFORMAL COATING REMOVAL EQUIPMENT

CCR-WC-LV1

The NEW Work Center is a modular design. Call Crystal Mark, Inc. their staff will help you to configure this NEW Work Center to meet your needs.

- Ergonomic arm supports are standard in the work center.
- You can use it as a standalone with built-in dust control or connect it to a central dust collector.
- It has a large 24" x 20" enclosed work area with a bolt-on microscope mount.
- The unit is easy to clean without any mess.
- Customers have options for an additional ESD control package.
- The Work Center works with all SWAM Model blasters.
- Glove/Sleeve kits are optional.
- It can be built into an existing table or cabinet when connected to a central dust collector.
- Mobile base with locking casters.

ESAMBER

Ref Low Process Performance Analyser

- USB Data Download
- More realistic
- Accurate Quantification of test data

Almighty Wave Performance Tester

- Process Optimization
- Reduction of Defect Rates
- Precise calculation of tin plating time

Vertical Oven Profiler

- Small space occupation
- Reduced heat absorption
- Rechargeable batteries
- Reduce battery loss

On-line intelligent Monitoring System for reflow

- The guarantee of quality
- Optimization of production
- 7 days 24 hours automonitoring

Temperature Profiler

- More
6/8/10/12/16/20/24/32
- Fast
- USB 2.0 Port provides faster data loading speed
- Good Intelligent data protection no error & missing, data lost-proof in case of power-off or misoperation
- Save Energy-save design, standby can be as long as 280 days

System Selective Wave

- Wave Temperature
- Wave Height
- Flux Spraying Accuracy
- Repeat Accuracy

PCB/PCBA Shorts Detector

- Zero defect
- Unmanned
- High intelligence

Vacuum Vapor Phase Soldering Temperature Profiler

- Profile simulation
- SPC Analysis Statistics
- Profile Merging
- Comparative Analysis

ATTEN

SOLDRING & DESOLDERING EQUIPMENTS

GT Series Soldering Station

- Big TFT color screen
- Using integrated soldering tips
- Auto standby and sleep function
- Password-protected function

Features:

- Compatible with various types of soldering tools, support replacing handles and tweezers between 50W to 150W
- Using integrated soldering tips, rapid heating.
- Pluggable heater design, easy to replace.
- Silicone buttons operate comfortable.
- Auto standby and sleep function, conserves energy and protect equipment.
- Password-protected function to preserve settings.
- Built-in RS485 communication interface, support computer control.

Rapid temp recovery

Preset temp

ATTEN

SOLDRING & DESOLDERING EQUIPMENTS

ZT-660-150G

Auto-Feed Soldering Station

- Automatic tin dispensing system
- Temperature range 80-500°C
- The tin feeding speed and length can be set
- Adjustable amount of solder return to reduce waste of solder

MS-900

4 in 1 intelligent rework station

- Soldering station
- Hot air station
- Desoldering station
- Electronic tweezer

ST-7500/ST-7800

Preheating platform

- Three sets of quick parameter designs for quick temperature switching
- Temperature locking
- Equipped with an external K-Type sensor interface

Integrated Heater

Fast Thermal conductivity, Long Lifespan

Inline automation.

Technical overview.

- Repeatability: 0.007 mm.
- Maximum speed: 1400mm/s.
- All-in-one integration; preheating, dispensing, 2D AOI and curing oven.
- Linear motors enables a fast, precise and reliable process.
- Marble frame availability for the most demanding projects, speed up to 1800 mm/s.

Common dispensing applications.

- Underfill.
- Adhesives.
- Conformal Coating.
- TIM.
- Edgebonding.

Benchtop automation.

Technical overview.

- Repeatability: 0.007 mm.
- Maximum speed: 1000mm/s.
- 3, 4 and 5 axis models available.
- Vision system and laser enables easy programming and product location and 2D AOI.
- Integrated scale and nozzle cleaner reduces downtime.
- Linear motors ensure stability and precision will be met at every dispensing.
- MES reporting capability.

Common dispensing applications.

- Underfill.
- Adhesives.
- Primer.
- TIM.

Spray valves.

Technical overview.

- Wide spray (up to 8 cm).
- Micro spray (down to 2mm).
- Low pressure spray valve for selective dispensing.
- Dispensing of conformal coatings, adhesives, flux and more.
- Suitable for fluids from 1 to 7,000 cp.

Commonly dispensed fluids

- Conformal coating.
- Primer.
- Adhesives.

**Piezoelectric jetting valve.****Technical overview.**

- Dispensing repeatability of +/- 2%.
- Dispensing resolution of 1 nanoliter.
- Up to 1000 dots per second.
- Minimum bead width of 0.2mm
- Suitable for fluid from 1 to 2,000,000 cP.

Commonly dispensed fluids

- Underfill.
- Grease.
- Wax.
- Conformal coating.
- Hotmelts.
- Adhesives.

**Progressive cavity volumetric valve.****Technical overview.**

- Dispensing repeatability of +/- 1%.
- Minimum bead width of 0.25mm.
- 2 heating zones enable fluid viscosity control.
- Suitable for fluids from 1 to 500,000 cp.

Commonly dispensed fluids

- Underfill.
- Grease.
- Hotmelts.
- Adhesives.
- TIM.
- Pottings.

**2k component volumetric valve.****Technical overview.**

- Dispensing repeatability of +/- 1%.
- Minimum bead width of 0.2mm.
- Dispensed fluid resolution of 1 nanoliter.
- Suitable for fluids from 1 to 2,000,000 cp.
- Chiller available to stop the curing process, enabling savings on 2k mixing nozzles and downtime.

Commonly dispensed fluids

- 2 part components.

FST W

REFACCIONES PARA EQUIPOS HOT-MELT

Un servicio más de FSTW para optimizar tu producción.

Optimiza tus procesos de aplicación de adhesivos con nuestros equipos especializados y compatibles con Nordson, Robatech y Graco. Estos equipos están diseñados para brindarte máxima eficiencia y un rendimiento superior en cada aplicación, garantizando resultados consistentes y de alta calidad.

En Solid MFG, entendemos las necesidades de la industria, por eso ofrecemos soluciones completas:

Mangueras de alta resistencia y durabilidad

Manifolds precisos para una distribución uniforme

Filtros inline que aseguran un flujo limpio y continuo

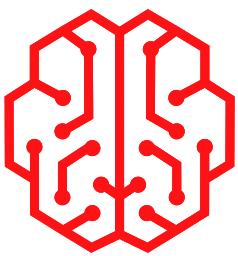

Módulos de fácil instalación y mantenimiento

Boquillas para aplicaciones precisas y sin desperdicio

Nuestros productos están diseñados para integrar tecnología avanzada con facilidad de uso, ayudándote a ahorrar tiempo y costos operativos mientras maximizas la productividad de tus líneas de producción.
